# HF18FZ

# MINIATURE INTERMEDIATE POWER RELAY

<u>کار ا</u>

(cac

File No: 40048406

### Features

- Multiple switching capability (2C, 4C type)
- With LED
- Conform to the CE low voltage directive
- 2.0kV dielectric strength(between coil and contacts)
- High electrical life
- High mechanical life •
- With test button

**COIL DATA** 

Automatic production 

### **RoHS** compliant

at 23°C

| COIL       |   |

Notes: 1) Under ambient temperature, applying more than 80% of rating voltage to coil, relay will take action accordingly. But in order to meet the stated product performance, please apply rated voltage to coli.

2) Maximum voltage refers to the maximum voltage which relay coil could endure in a short period of time.

Notes: 1) The data shown above are initial values.

ISO9001, IATF16949, ISO14001, OHSAS18001, IECQ QC 080000 CERTIFIED

## CHARACTERISTIC CURVES

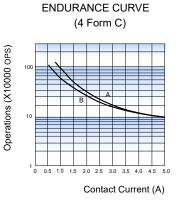

## CHARACTERISTIC CURVES

Notes: 1) Line A is Res.load 24Vd.c. Line B is Res.load 220Va.c. 2) Switching condition:NO or NC.

# **Relay Sockets**

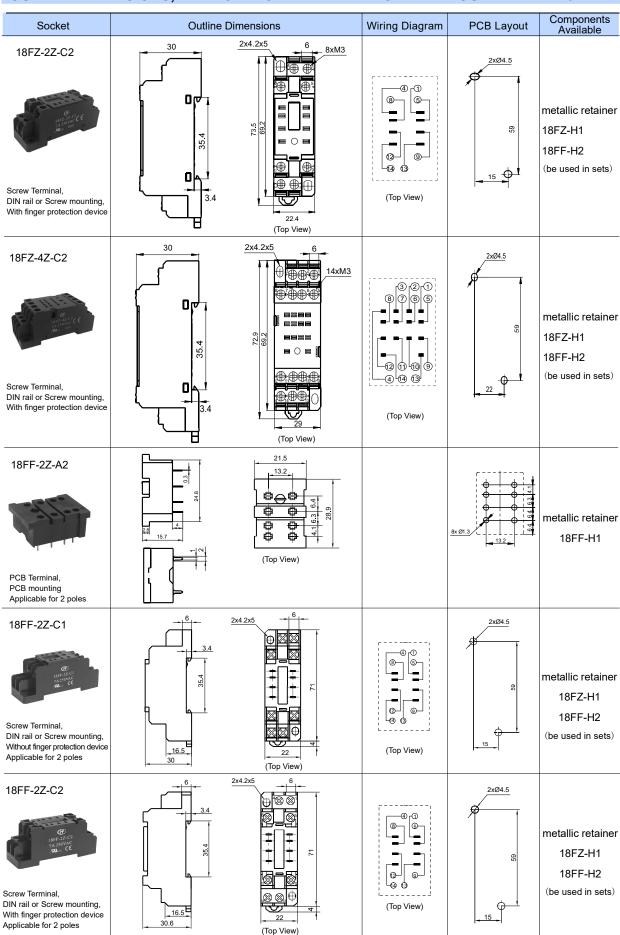

## Features

- The dielectric strength can reach 2000VAC and the insulation resistance is 1000MΩ
- Three mounting types are available: PCB mounting screw mounting and DIN rail mounting.
- With finger protection device
- Many kinds of plug-in modules are available with the function of energizing indication and wiring protection.
- Components available: retainer, marker and plug-in module
- Environmental friendly product (RoHS compliant)

### **Precautions For Use**

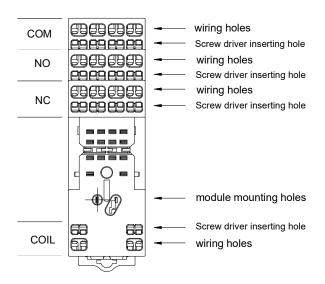

For your personal safety and the normal operation of the equipment, as well as to prevent fire, please note the following issues : 1. The rated current of the socket should be no less than the rated current of the relay.

2. Sockets are required to be firmly fixed to prevent the wiring from loosening and affecting the quality of wiring.

- 3.Be sure to disconnect power to the outlet before installation, disassembly, wiring, maintenance and inspection.
- 4. Prevent foreign objects such as wire shavings from falling inside this product when wiring.
- 5.Be sure to install the relay in place, and use accessories such as retainer if necessary to improve contact reliability. Do not use with incomplete connections.
- 6.Be sure to observe the relay ratings and do not overload the relay.
- 7.Before selecting a relay, make sure that the drive voltage matches the relay excitation voltage.

Precautions for the use of non-threaded terminal type sockets

1.Lead end socket description:

#### 18FF-2Z/4Z-C9

2. Things to be noticed when selecting soft wiring.

• The soft wiring can be divided into the following types.

0.5mm<sup>2</sup> above 1.5mm<sup>2</sup> below or AWG20 above AWG16 below the stranded wire or a single wire.

The front terminal of the wire needs to be peeled off 8mm to 9mm of insulation protection layer, the wire insulation protection layer diameter \*2.8mm or less. Please be sure to use according to this size.

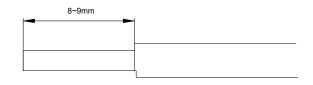

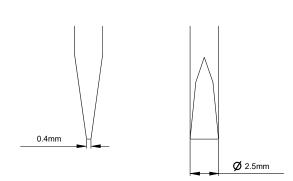

Figure 2

## **Precautions For Use**

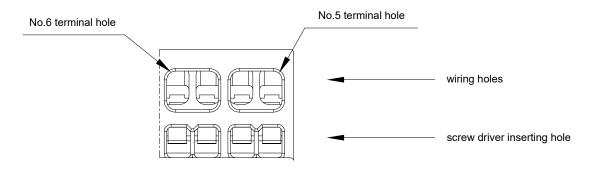

• If the protective layer is stripped too short, the wire may be pulled out, and if it is too long, it may be short-circuited to the neighboring wires. If using the stranded wire with cold crimped terminals, please twist the stranded wire tightly before use to avoid loosening the wire.

When wiring, use a screwdriver as shown in the figure.

### Figure 3

• The insertion position of the wire and the screwdriver and the insertion direction of the screwdriver are as shown in Figure 4.

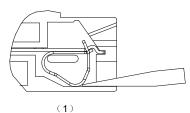

### **Precautions For Use**

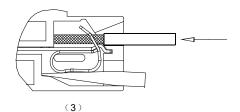

Step 1. Insert the screwdriver into the screwdriver insertion hole (square hole) of the socket so that the screwdriver is inserted in a slightly angled direction until the head of the screwdriver is between the back of the spring terminal and the wall of the cover.

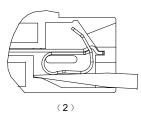

Step 2. Keep pushing the screwdriver in until it contacts the stop position inside the socket and the junction is released, keeping the screwdriver in that position. The screwdriver will not come off even if the hand is released.

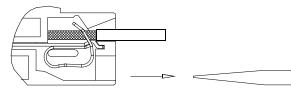

Step 3. Keeping the screwdriver in the insertion hole, insert the wire or cold crimp terminal to the bottom of the wire insertion hole.

Step 4. Pull out the screwdriver and the wiring is completed.

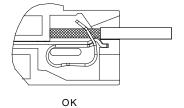

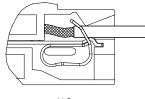

### Figure 5

Note : When using wire with insulation protection diameter of  $\phi$ 2mm or less, do not insert the insulated part of the wire into the spring clamp opening position .

#### Things to be noticed when selecting sockets:

- 1. Please choose suitable relay socket according to the actual mounting environment, relay contact poles and terminal layout. If there is any query on selection, please contact Hongfa for the technical service.
- 2. Socket which can be mounted with markers is furnished with a marker; as for other related components, they should be selected separately. Please do give clear indication of the types of relay sockets and related components you choose while placing order.
- 3. The above is only an example of typical socket and related component type which is suitable to HF18FF relay. If you have any special requirements, please contact us.
- 4. Main outline dimension, outline dimension>50mm ,tolerance should be ±1mm; 20mm<outline dimension ≤50mm, tolerance should be ±0.5mm; 5mm<outline dimension ≤20mm, tolerance should be ±0.4mm; outline dimension≤5mm, tolerance should be ±0.3mm.</p>
- 5. DIN rail mounting: recommend to use standard rail 35×7.5×1mm, 35×15×1mm.
